

Facts about ProFect® liquid PU resin

- + Versatile products can glue many types of materials
- + Provides high adhesive strength
- + Possibility of very flexible production

Can be used in sandwich constructions, filter production, gluing artificial turf and rubber underlay, outdoor gluing, insulation and more.

- 1K – used directly without the addition of hardeners
- 2K – more options with hardener added
- Ny 3K solution, flexible in production, greater output

ProFect® liquid PU glue

ProFect® liquid PU glue

ProFect® liquid resin gives you the ultimate flexibility to adapt the glue exactly to your product.

There are many benefits to using liquid PU, and it is available as 1K, 2K and 3K systems. This makes the glue very versatile.

1K absorbs the natural moisture and thus hardens, whereas 2K and 3K are chemically and precisely controlled. Do you need a quick press time or need more open time, then liquid PU can be adapted specifically to your production needs.

ProFect® liquid PU is used, among other things, in sandwich and filter construction, and because of its great diversity and durability it can be used to glue most materials. Liquid PU is very waterproof and withstands sun and heat. Therefore, it is suitable for outdoor use.
